---

when setting up VC directory, I setup my VC directory as:

D:\Program Files\Microsoft Visual Studio 9.0\VC

since in common sence the compiler path should be a layer upper of bin directory.

when try several examples with fail I noticed it should set as:

D:\Program Files\Microsoft Visual Studio 9.0

so I suggested you provide hints and check strategy such as bin/cl.exe.

or read directly form registry would be nice.
