Running the following code causes GridCtrl to crash:

ASSERT FAILED: Assertion failed in c:\upp\uppsrc\core\Vcont.h, line 33  
i >= 0 && i < items

```
class Ma_app : public TopWindow {

public:
Ma_app() {

Zoomable().Sizeable();

for(int col = 0; col < 10; col++) {
grid.AddColumn(Format("col %d", col));
for(int row = 0; row < 10; row++) {
grid.Set(row, col , "x");
}
}

//VVVVVVVVVVVVV HERE COMES THE FAULT LINE VVVVVVVVVVVVVV
grid.SelectRow(false).RowChanging(false);

Add(grid.SizePos());
}

GridCtrl grid;
};

GUI_APP_MAIN
{
Ma_app().Run();
}
```

Pressing Ctrl + LMB on a cell, just like when you do a Ctrl-selection, or anywhere in the grid, will trigger the exception.

What is GridCtrl::RowChanging(bool) for?

The crash happens when both GridCtrl::SelectRow and GridCtrl::RowChanging methods are combined.

Why? (bug?)

tksl

Thanks!. It's fixed now and it will be committed today evening. RowChanging(false) simply doesn't allow to change row in grid (it is another kind of read-only grid, you cannot click on cell/row but grid is not grayed out)

Thanks for the patch and for the explanation!

Thank you also for promptly answering to my other post "GridCtrl help needed [message #32650]" in this very same section (newbie)!

Congratulations for your extremely versatile GridCtrl project!
