avira antivir products uses hueristic analysis to detect malware, which antivirus product does'nt.

this is a false alarm, thats for sure.

i think the developers of UPP should take up this matter with the antivirus companies and clear up the issue.

a very nice product like UPP should not have any bottlenecks whatsoever. it may deter some windows platform developers from using such a wonderful product.

I think avira has not very clever heuristic, it has false positives (different) for regular theide as well.
It was already reported to the company making the software:
http://www.ultimatepp.org/forum/index.php?t=msg&goto=32341&&srch=avira#msg_32341

Best regards,
Honza
