Subject: TheIDE editor and accented words

Hello all

Now when doing left double click in TheIDE editor it does not choose accented chars.

This way if strings have accented words, these are selected only partially.

The reason is that in CodeEditor.cpp, GetWordPos() chooses using iscid() that select ascii letters between a and Z. However with LineEdit, TextArrayOps::GetWordSelection() is more flexible.

Could it be possible to selected non ascii letters too?
