Hi,
i don't want to put a TabCtrl in a layout, instead i want it be created dynamically. Is it possible?
Thanks

Hi o_wild

Of course, just as any other Ctrl. You just have to have an instance of TabCtrl and than Add() it to a parent where you want it. You'll most probably also need to set position/size using LeftPos(),SizePos(), etc. How you get the instance is up to you - it can be a class member, it can be created inside a container (e.g. 'Array<TabCtrl>::Add()' or One<TabCtrl>) or even created using operator new (but that is really discouraged ).

Best regards,
Honza
