Subject: GridCtrl: assign default value & WhenAcceptRow

Hello,

I have two question about GridCtrl with embedded ctrls via .Edit():

1) is there a way to assign a default value when creating a new row? With ArrayCtrl exists InsertValue(...), for axample:

array.AddColumn(COUNTRY,"Country").Edit(country).InsertValue(12);

Is there an equivalent/alternative way?

2) before the row is accepted I want to check its data and eventually refuse them and force the user to continue the edit task.
I used the WhenAcceptRow to perform the checking (as done with ArrayCtrl but there it is a Gate - ). Unfortunatly the row is always accepted.
Which is the suggested method with GridCtrl to validate the data?
This one works for ArrayCtrl but with GridCtrl complain about 'bool' returning value of the callback.

Thanks,
Luigi

In WhanAcceptRow callback use grid.CancelAccept()

In WhanAcceptRow callback use grid.CancelAccept()

Thank you, it works (permit me to continue to edit the row and correct it) but how to accept the row and set cancel_accept to false? I cannot move to another row to edit and the application cannot be closed.
I tried grid.Accepting() but no result.

thanks,
Luigi

EDIT: I was silly... just

```
grid.cancel_accept=false;
```

at the end of the callback do the job!
