Hi,

I have a question regarding saving users configurations as xml from Ctrls.
for example-

```
xml <<
  XmlHeader() +
  XmlTag("Phonebook")
(
  XmlTag("Name").Text(panel1.droplist1.GetData())+

  XmlTag("Address").Text(panel1.editfield1.GetData())+

  XmlTag("Phone").Text(panel1.editfield2.GetData())
};
```

what is the best way to xmlize configurations from switches and options ctrls?

regards
dave
