When I try and compile and run Docking in bazaar I get the following error:

Linking...
LIBCMTD.lib(wincrt0.obj) : error LNK2019: unresolved external symbol _WinMain@16 referenced
in function ____tmainCRTStartup
C:\upp\out\MSC9.Debug.Debug_full.Gui\Docking.exe : fatal error LNK1120: 1 unresolved
externals

I did a search for the WinMain@16, and could not find anywhere it is defined.

Not sure if it is what I want or not. I am really looking for having a man container and then be able
to open and close several windows of data inside of that under menu control. Any other working
examples of that?
