
Subject: Getting compile errors, I modeled after TreeCtrlDnd, but I can't see the error

I am trying to code a tree and use the WhenLeftDouble, to do some processing.

I am getting the following compile errors:

```
C:\MyApps\Train3\main.cpp(11) : error C2146: syntax error : missing ';' before identifier 'CLASSNAME'
```

```
C:\MyApps\Train3\main.cpp(11) : error C4430: missing type specifier - int assumed. Note: C++ does not support default
```

```
-int
```

```
C:\MyApps\Train3\main.cpp(11) : error C2208: 'Upp::TopWindow' : no members defined using this type
```

```
C:\MyApps\Train3\main.cpp(11) : fatal error C1903: unable to recover from previous error(s); stopping compilation
```

```
main.cpp
```

```
Train3: 1 file(s) built in (0:01.60), 1604 msec / file, duration = 2948 msec, parallelization 14%
```

There were errors. (0:23.82)

It looks similar to the TreeCtrlDnd in the reference item, so not sure why? Everything that I can see has the ; as required on it.

Also once I get to the ItemDC, how would I identify which item was double clicked upon?

I have attached my code.

Thanks

David

Hi David,

The compilation problem is most probably just too much copy-paste struct MyApp : TopWindow {

```
SplitterFrame sf, RightSide;  
TreeCtrl tree;
```

```
typedef App CLASSNAME; // <-- There is no type "App", it must be "MyApp"
```

```
...
```

To identify the line you clicked on, you can use `GetCursorLine()`, e.g.: `void ItemDC()`

```
{  
    PromptOK(DeQtf("Clicked on line " + IntStr(tree.GetCursorLine()) + "!!"));  
}
```

Best regards,
Honza

Thank you. I did cut and paste from a couple of programs.

And the other worked out great.

David
