This time, it is HW failure - I have to rebuild the server.

I hope to get it working today. It should have been yesterday, but bad luck: I got new motherboard, new CPU, new memory but have not got a new PSU. And it seems it have fried the old HW and now the new HW as well I guess I have to get another set

Thank you for your effort; it is priceless.

I have a proposal: What about if the community contributes by providing some funds? If this of interest, we could promote this notion among the other community members.

Well, if you feel like to donate, here is the link (as always):

http://www.ultimatepp.org/www$uppweb$Funding$en-us.html

OTOH, there is no actual pressure there. With current prices of hardware, those are just pennies...

Thank you Mirek.

Yes, it is a good link to remember .
