Hi,

I am trying write and read commands to pipe /dev/rtp0 and rtp1..

can anyone provide an example for this...

I tried with FileOut method but didn't get the thing..

```
FileOut file1;
file1.Open ( "/dev/rtp1 " );
file1.Put(&wr1,sizeof(wr1));
```

where wr1 is

```
struct write {
    int command;
    int data;
};
write wr1;
```

Also is " file1.Put(&wr1,sizeof(wr1)); " is the right method to write data to any file other than /dev..????

Also is " file1.Put(&wr1,sizeof(wr1)); " is the right method to write data to any file other than /dev..????

pipe does not have support in U++. You have to use C API.

Mirek

Thanks Mirek.  
Is there any example so that i can know the method of using C API in upp..

Also if i want to write a data declared in structure into a file does this method holds good?

```
file1.Put(&wr1,sizeof(wr1));
```
