Cool, you're extending it. I hope you're going to add Luigi's tutorial. It would also be helpful if there was a quick link to all the tutorial stuff from a help menu in theIDE.

Is it still planned to make the help searchable or indexed and for "find" to work in a topic++ page?

Graeme

Sure, it is.

I am sorry, U++ development recently might seem to be slowed down, however it is caused by huge refactoring of those Images - it takes a lot of time to get it right. I hope that it will be finished by the end of month, I hope there will be more visible changes later.

BTW, as a nice sideeffect of new Image, "core" GUI application size will be reduced by

200-400KB...

Mirek, don't worry about the lack of "visible" changes in Ultimate. The new Image is a huge leap forward! At last I can play with semi-transparency!

There's no rush as far as I'm concerned. I just thought it worth expressing my opinion that the lack of organized help is a deterrent for quite a few people - just my opinion though. It seems I was the only one who got hung up on what "set main package" meant!

I notice you didn't include the code I posted for CopyWord and SwapChars. Do you accept enhancements to the source code at all? Suppose I wrote code to allow Esc macros to do copy/paste or have global variables - would it be accepted?

Consider me guilty - I noticed that you have posted some request, however, as I have not felt to consider it / react at the moment, I deferred...

OK, going to do it now...

OK, I try to do it today. I only noticed this topic by accident: in the future a private message could make it sure that I do not miss topics concerning me doing something
