I have added a new status to the Redmine intended for patch submission... (Ready for QA should be really reserved for the final QA).

Hello, Mirek.

I would like to clarify this topic.

Now, if developer create a patch and submit it for the issue, (s)he need to select "Patch ready" status, right?
In what situations, after this, the status of the issue can be selected for "Ready for QA" and later for "Approved"/"Rejected"? And who really must select this after (e.g. issue starter, developer who did quality analysis and/or applied the patch to repository)?

I would like to clarify this topic.

Now, if developer create a patch and submit it for the issue, (s)he need to select "Patch ready" status, right?
In what situations, after this, the status of the issue can be selected for "Ready for QA" and later for "Approved"/"Rejected"? And who really must select this after (e.g. issue starter, developer who did quality analysis and/or applied the patch to repository)?

Ideal sequence:

Well, there is issue. Person A finds it and posts (directly or inderectly) to RM.

Person B, without direct write priviledges to update uppsrc fixes it. Posts a patch to the very same RM issue as "Patch ready"

Person C (one from "cxl", "trc" or "unodgs") checks the patch, applies it to uppsrc, commits svn,

changes to "Ready for QA" and assigns the task back to A to check it solved the problem.

Does it makes sense? My problem was that "Ready for QA" was the status for QA person, preferably the one that has submitted the issue....

Surely, in practice, I will make it "Approved" after applying the patch quite often, but that is another issue (like missing QA ?

Does it makes sense?

Yes, it makes sense.
Paraphrasing, "Ready for QA" is responsibility of A, if C wants to check quality of applied patch(es) from A point of view. Further, A changes issue status to "Approved" or writes comments about new issue(s). The "Ready for QA" issue status is not mandatory.

Thanks for answering.
