Yes, obviously I have to move some .pngs yet... There were more pressing matters...

BTW, I would like your opinion on FudForum. It is pleasant to use as a user, but how about the setup and administration?

I would say normal administration is OK.

The reason I was having difficulties is because for some reason (maybe I have nuked something in the forum), the export->import functions did not worked as expected. It inserted some strange values into MySQL, basically it assigned all users nonexistent forum themes, which resulted in blank pages rendered. Well, whatever, I guess it was about the time to learn a bit of PHP, right?

Also worth noting is the fact that we are about 5 years behind the current version...
