Hello.

By means of community the package under Altlinux (altlinux.ru) has been collected.

TheIDE is running.

But when I launch compilation, there is a message:

Quote: fatal error: Core/Core.h: There is no such file or the directory  
compilation terminated.

In "/usr/share/upp/uppsrc/Core" I'm show this files.

And in application directory there are empty directories with a title of used libraries: CtrlLib, Core, Draw, etc.

How much I have understood, business in ways to files. Only where to look and where to adjust it, I can't find.

Hi Assargadon,

How are the assemblies set up? You can find that by looking into ~/.upp/theide/\*.var files or right-clicking on assembly name in "Select main package" dialog when theide starts and selecting edit assembly. E.g. for MyApp, there should be correct paths to MyApp directory and to uppsrc directory.

Also, could you post a link to the package? Maybe we could spot some problem in configuration or something similar, if there is one.

Best regards,  
Honza

Hi Bolik.

Examples, tutorial, reference aren't launched also.

Link: [http://git.altlinux.org/repo/57351/i586/RPMS.task/upp-4085-a It0.M60P.0.1.i586.rpm](http://git.altlinux.org/repo/57351/i586/RPMS.task/upp-4085-a%20M60P.0.1.i586.rpm)

The package looks good, as far as I can say from non-rpm distribution... So the problem is probably in the way theide sets things up upon the first start. Could you try to delete/rename .upp directory in your home and start theide? You should be presented with a wizard dialogue to set up the code locations. Please leave everything on defaults and click finish, it should produce a working settings.

If it still doesn't work after this, please send me the files uppsrc.var, MyApp.s.var and updates.xml that got created in the .upp/theide directory inside your home directory.

Thanks, Honza.

After removal all packets became visible, and I'm run command-line application

But now swears so:

Quote:/assargadonix/upp/uppsrc/plugin/png/pngupp.cpp:4:17: fatal error: png.h: There is no such file or the directory

compilation terminated.

But the file is present.

Assargadon wrote on Mon, 31 October 2011 13:37Thanks, Honza.

After removal all packets became visible, and I'm run command-line application

Great

Assargadon wrote on Mon, 31 October 2011 13:37But now swears so:

Quote:/assargadonix/upp/uppsrc/plugin/png/pngupp.cpp:4:17: fatal error: png.h: There is no such file or the directory

compilation terminated.

But the file is present.

It is actually not looking for png.h from the plugin/png directory - that one is only used on windows. On linux and other posix platforms, U++ tries to link against libpng. This error probably means you

don't have the corresponding development package installed. If I googled correctly, it should be called libpng-devel on altlinux. Note that you might run into similar issues with some other libs soon, if I remember correctly, you might need development packages for following (actual names might vary slightly for your distro...):

libx11  
libxft  
libpng  
libgtk2.0  
libnotify

Thank you very much. And I any more didn't know that for what to catch. We will achieve the full serviceability of the program:)

It's work:)  
If more errors it will not be possible to collect a packet under OS.  
Thanks once again, Honza:)
