Subject: Window with no border?

Hello
I have multi-window application and I need to create a window with no border and caption. Think about mail information strip etc (this is just an example, not what i'm doing). I thought FrameLess() should do that, but the windows has thick border.
I was trying this->Style(WS_VISIBLE) but this works only when called, then when i move the second (main app) window, the caption and the frame appears and the application is unstable.
So can i do this somehow and if not, would it be hard to add? (i found some old post about this, but i don't need a popup window)

Do a Search for "FrameLess".

I don't know the problems involved when included inside another window.

That works for the main GUI.
BUT there are a few glitches such as the title bar with the controls to min/max and close are gone and the tray icon doesn't work for the right click options IIRC.
Maybe that has been fixed.
