Hi,

I'm really new to U++ and I got a problem with the GUI.
Just tried to make a simple calculator (to get in touch with the IDE) and now heres my first
problem, the TabCtrl is cut at the half of it.

ITEM(TabCtrl, tabViews, LeftPosZ(20, 460).TopPosZ(208, 132))

tabViews <<= THISBACK(changeView);
   tabViews.Add("Hide");
   tabViews.Add("Error");

This should be the relevant code... I think the screenshot shows what I mean..

Thank you for help!

Wolfgang

Btw. Hello to all!

Btw. Hello to all!
 Hard to say. It does not do this normally, I swear. Could you eventually zip the whole package and send here? (Better option than sending .png anyway).

Mirek

Hello, Wolfgang.

Your screenshot shows the problem in the context of other layout items.

I attached package with correct layout example. It contains example with composite layouts, with using Splitter, also.

Thanks a lot for the fast replys...

I'll take a look at the Splitter example... as I told you I'm really new to U++, specially to GUI so sorry if I don't know all posibilities.

I'll send the whole package tomorrow (projekt is on another computer..) as a zip file.

Wondered how to get more widgets? into the designer?!

It seems you have not properly anchored the TabCtrl to the bottom of the layout. I modified it in this way:

and the clock appeared while before was hided.
