Hello Sc0rch

I have tried to compile unsuccessfully your new package MapRenderTest.

Some of the errors are:

- In Map/MapView.cpp, line 257: 'rooms' and 'r' were not declared
- In MapCommon/IMapRender.h, line 48 and 49 and more: MSC compiler complains about: class 'Upp::Array<T>' : no copy constructor available or copy constructor is declared 'explicit' with
[
 T=Upp::Point
]

The solution is to remove the "const" from ViewToScene(const Array<Point>& p) and ViewToScene(const Vector<Point>& p). And the same for the rest of functions.

- I cannot find "marcos.map". Do you have a sample?
-

Anton's map rendering engine - it's very convenient! I've been using it, and advised to publish in the Bazaar.

I propose to give rights to Anton (scOrch) for self-publishing his brilliant module.

Ops He was already at the Bazaar ... That's great.

I'm on his word not refuse. What did Anton - very cool.

I can make screencast with Anton's module, if anybody want this.

The package will be updated soon. With example map and comments. I'll write here about update.

P.S. New version has more faster render. Next step - Path Finding.

P.P.S. I'll check the errors.

I still can't compile it.
