Subject: TheIDE crash and possible fix (602) [WAS FIXED]

To reproduce:

1) open TheIDE
2) create an empty package
3) open package organizer
4) right-click

TheIDE crashes in release mode, and asserts in debug mode

Proposed fix:

UppDlg.cpp, in void PackageEditor::OptionMenu(Bar& bar)

```
 bar.Separator();
+ if (!option.IsCursor())
+ {
+  return;
+ }
 int type = option.Get(0)
```

I don't know what is the best way to fix, but this hack worked for me

Thanks, in fact, this was fixed a while ago.

At least it looks like that the learning curve is not that bad for u++

It was identified and fixed AFTER 602 final.

hmm. yes, but there is no u++ devel in ports, only final builds.

when the new version, or some minor final update (ie. 602.1) will be released, so they could port it to freebsd?

Ah, BSD

You can always take latest sources and compile them using TheIDE.

Next version, 605, is in release process now. RC2 will be released toninght or tommorow. Well, main releases are windows and linux, FreeBSD port will likely be released later.
