Subject: How do I get back to the .lay visual editor after a run

I made my first .lay file work.
Once it compiles and run, theIDE turns the .lay visual editor into a text file with the LAYOUT
macro struct. Nice but how do I get back to the visual editor?
I expect I must be blind or just plain stupid.
My work-around is to restart the ide.

(I did search and scan the Help files).
Regards,
Conrad

With <ctrl> + t you can switch between the code and the layout.

I searched the first time,too

good luck!

Hello Conrad

Just click Ctrl-T.

It happened the same to me when I began .

Thanks to all!
As I suspected, I was blind & probably stupid.
I never even considered trying the Edit menu!
Learning new ways of doings things can be a trial. I had a serious hard time adding new files until
I finally stumbled upon it while reading the documentation for a completely different reason. Ok, so
"Open.." and "New.." are similar actions but I have used a New menu item in hundreds of

applications since my first 512k Fat Mac in 1985...
Thanks again,
Conrad
