Hi there,

today I translated some text from english to german language (the overview file with pictures in it...)

To check the spelling with an external tool I simply wanted to copy the whole content of the .tpp file (opened it in theIDE with the AllForl18n package <ctrl> + a and <ctrl> + c) and insert it in MS Word (2010) (<ctrl> + v) - windows tells me immediately that theide doesn't response any more. If I close it the content that I tried to insert appears in Word...

Looks like a bug for me?!

Sorry, don't know where to post this - so it is here.

best regards,  
Wolfgang

Note that there is spell checker in T++, but for de-de you have to download the dictionary on sourceforge.net U++ downloads:

[http://sourceforge.net/projects/upp/files/SpellerDictionarie s/Aspell/](http://sourceforge.net/projects/upp/files/SpellerDictionarie%20s/Aspell/)

thanks for the info,

is it possible to hide the non-printing control characters in t++? (like paragraph or space chars)  
and is it possible to zoom in it (because on my notebook where's such a small screen )?

Wolfgang wrote on Sat, 26 November 2011 16:40is it possible to hide the non-printing control characters in t++? (like paragraph or space chars)

Yes there is a trick for that In the editor, there is a little wrench icon on the right side, where ruler meets the scrollbar. Here you can set a color of the non-printable characters. If you set it to transparent, they will disappear

Wolfgang wrote on Sat, 26 November 2011 16:40and is it possible to zoom in it (because on my notebook where's such a small screen )?

Zoom setting is in the very same dialog. Unfortunately, it works only the other way, making things smaller. Maybe this could be changed, I would like to be able to zoom in as well, as I often use theide on 10" display

Honza
