It would be nice to have something like this in U++: http://qtwui.sourceforge.net/

Even better if we can use the same U++ code and layout editor as with normal widgets and just use a switch like "#define webUI".

With this feature we could have Web interfaces for our applications. Similar to what qBittorrent app does, allowing the user to also control the interface by acessing: http://IP:8080 from another computer.

Thanks

WOW!
Didn't know this!
Looks like the future is very bright for U++!
