Is there a imap solution in ultimate++?
Or do i have to implement one by myself?

No, there is no IMAP solution in U++.
As an option you may use one of open-source mail libraries for C++.

thank you for information, I'll check for an external library - just wanted to check an imap server for new messages, not more

It was quite long ago, but I remember that after a number of attempts I succeeded in compiling vmime. Then it was a problem with vmime memory manager which conflicted with U++ memory manager. So I had to use USEMALLOC flag for building U++ vmime programs. Then I switched to another library. It's a pity no sources left after that experiment.
