Hello all,

```
Color color;  
color.SetNull(); // transparent
```

```
xml("color", color);
```

```
// here color become black
```

thanks

Hello Mirek,

```
There is a function:  
void Xmlize(XmlIO& xml, Color& c);  
in Xmlize.h
```

it must be modified too, or removed to let the compiler call Color::Xmlize().

What you think?

Sorry. The real deal it is active only with "old" Value. I have originally planned to finally remove old

Value this weekend, due to some issues might be postponed till next one. That the function in Xmlize.h will be deleted.

Meanwhile please just put "SVO_VALUE" into your main config.

OK.

Thanks a lot.
