Hii,

I have programmed to generate the report and print it, followed the example as shown in reportgen prog. I could compile and get the desired out put on linux platform. same program i tried to execute on Windows and following error occurs. Could you please tell me how to solve the issue.

erpprint.cpp

In file included from C:\MyApps\ERPPrint\erpprint.cpp:1:0:

C:\MyApps\ERPPrint\ERPPrint.h: In constructor 'ERPReportWindow::ERPReportWindow()':

C:\MyApps\ERPPrint\ERPPrint.h:27:30: error: cannot call constructor
'ERPReportWindow::ReportWindow' directly

C:\MyApps\ERPPrint\ERPPrint.h:27:30: error: for a function-style cast, remove the redundant
'::ReportWindow'

ERPPrint: 1 file(s) built in (0:01.82), 1828 msec / file, duration = 1843 msec, parallelization 0%

There were errors. (0:01.90)

Hello Shwetha

Could you include ERPPrint.h file?

Anyway I guess you are compiling with MinGW and there is some kind of redundancy in class declaration, like:

```
class MyClass {  
    MyClass::MyClass(); // MinGW does not like this redundancy
```

};

Hi Koldo,

Please find attached file.

File Attachments

1) [ERPPrint.h](#), downloaded 322 times

Hello,

you make it work by removing the line :

```
ReportWindow::ReportWindow();
```

a derived class call its base constructor automatically.

a derived class call its base constructor automatically.

Oh yes.

You wrote this:

```
class ERPReportWindow : public ReportWindow
{
public:
    typedef ERPReportWindow CLASSNAME;

    ERPReportWindow()
    {
        ReportWindow::ReportWindow(); // This line is redundant
    };
};
```
