Hi there,

Having looked through all the TabCtrl functions and examples and this forum, I cannot see where to change the name of a Tab once created.

There must be a way to do this right?

Just to be clear....

```
...
 towerDefs.Add();
 CtrlLayout(towerDefs.Top());
 towers.m_tab.Add(towerDefs.Top().SizePos(),"this is the name which I want to be able to change");
 ...
```

where m_tab is a TabCtrl.

Cheers,

Nick

Hi Nick,

sure, it is possible I believe you can do it like this:

```
...
 towerDefs.Add();
 CtrlLayout(towerDefs.Top());
 towers.m_tab.Add(towerDefs.Top().SizePos(),"this is the name which I want to be able to change");
 ...
 towers.m_tab.GetItem(0).Text("this is the changed text");
```

Best regards,
Honza
