Hi,

I want to be able to resize columns in an ArrayCtrl to fit the contents of the column - like when you double-click on the gap between two column headers in Excel.

I have set about this but I appear to be missing elements:

=> there is no double-click event for a column header (so I am using a popup menu on right-click just now)

=> I can't find the font for the array - only for the header tab

Are there any examples of this? I can't help thinking that this must have been done many times before.

Nick

Hi, nixnixnix!

You can probably use ArrayCtrl's WhenLeftDouble, check if mouse position is close to column boundary, ie, +/- 3 pixels. It's not ideal, but a tiny bit more convenient than use a menu. And it will not work for the right most column.

By default, ArrayCtrl use StdFont(), and if you used customized Display for a column, you should have it report the desired width.

I have set about this but I appear to be missing elements:

=> there is no double-click event for a column header (so I am using a popup menu on right-click just now)

Added HeaderTab::Column::WhenLeftDouble, WhenLeftClick.
