Hello all

There are some problems when compiling U++ in Windows.

Socket.cpp includes `#include <Ws2ipdef.h>` and `#include <Ws2tcpip.h>` that apparently are not in MinGW.

Web.h in class `IpAddrInfo` declaration includes `addrinfo` that apparently is not included before.

koldo wrote on Sun, 08 April 2012 10:36Hello all

There are some problems when compiling U++ in Windows.

Socket.cpp includes `#include <Ws2ipdef.h>` and `#include <Ws2tcpip.h>` that apparently are not in MinGW.

Could not we just say that mingw is not supported anymore?

Alternatively, please propose a patch.

Mirek

Hello Mirek

You know that in a next future it could happen in Windows the same that happened with PocketPC few years ago... Microsoft just decided that MSC compiler was not going to be free ("gratis").

So to support MinGW is not an effort but an advantage. And it has been very little effort.

Anyway we will propose a solution very soon .

Anyway the problem in Web.h remains: it happens using MSC too.

I am now committing changes to Core like 5 times a day. Last one was 20 minutes ago, at that time MSC compiled. Do you have the latest?

Hello Mirek

I have deleted uppsrc folder and downloaded it again now but I get compiling errors in Web.h.

core\Web.h(19) : error C2143: syntax error : missing ';' before '*'
because the compiler do not have "addrinfo" declared.

hi there..

i have the same problem, using MSC9 and TDM GCC 4.51..

what is, btw. considered supported and what unsupported?
maybe we should maintain a list of supported/unsupported dependencies..

any idea where to get the dependencies resolved?

That is weird, addrinfo should be in the same header as sockets...

In any case, we cannot have ipv6 support without addrinfo.

Hello Mirek and Kohait

In my PC it works now. The changes included for sure are not perfect but they serve:

In Socket.cpp, for MinGW

```
#ifdef PLATFORM_WIN32
```

```
#include <winsock2.h>
```

```
#ifdef COMPILER_MSC
```

```
#include <Ws2ipdef.h>
```

```
#endif
```

```
#include <Ws2tcpip.h>
```

```
#endif
```

In Core.h

- Include this before windows.h, for MinGW

```
#ifdef COMPILER_MINGW
```

```
#define WINVER 0xFFFF
```

```
#endif
```

- To add:

```
#ifdef PLATFORM_WIN32
```

```
#include <ws2tcpip.h>
```

#endif
```

In Core.h

- Include this before windows.h, for MinGW

```
#ifdef COMPILER_MINGW
#define WINVER 0xFFFF
#endif
```

- To add:

```
#ifdef PLATFORM_WIN32
#include <ws2tcpip.h>
```

Not quite sure about "To add".

Could you attach both files to be sure?

Hello Mirek

Here are the files. Changes are very easy.

- Ws2ipdef.h is not in MinGW and it is not necessary
- Some files require ws2tcpip.h. It can be included in Core.h or in other file
- For some reason MinGW requires a high WINVER to consider addrinfo infrastructure

MSC9 compiles again...

TDMGCC 451 doesn't link..

D:/uppsvn/out/dfm-git-cl_svn/Core/TDM451.Debug.Debug_Full.Gui.Mt.Shared.So\Socket.o: In function `ZNK3Upp15SocketWaitEvent3GetEi':

D:/uppsvn/uppsrc/Core/Socket.cpp:766: undefined reference to `__WSAFDIsSet@8'

D:/uppsvn/uppsrc/Core/Socket.cpp:768: undefined reference to `__WSAFDIsSet@8'

D:/uppsvn/uppsrc/Core/Socket.cpp:770: undefined reference to `__WSAFDIsSet@8'

cheers

Hello Mirek and Kohait

In my case MSC9, MSC10 and MinGW TDM 461 compile and link well.

Hello Mirek

Please include ws2_32 in Core Package Organizer when WIN32 GCC.

This way Core.upp would include:

```
library(WIN32 GCC) "ole32 oleaut32 uuid ws2_32";
```
