Hello Daniel

Actual implementation is:

```
bool GridCtrl::IsRowEditable(int r)
```

```
{  
    if(r < 0)  
        r = curpos.y;  
    else  
        r += fixed_rows;  
  
    return vitems[r].editable && hitems[curpos.x].editable;  
}
```

I have found possible to call IsRowEditable() with r = -1 and curpos.y = -1, so an exception is thrown because of vitems[-1].

May you check this case in the function?

I have found possible to call IsRowEditable() with r = -1 and curpos.y = -1, so an exception is thrown because of vitems[-1].

Please describe step by step how to achieve such a grid state, only then I will be able to fix it.

Please describe step by step how to achieve such a grid state, only then I will be able to fix it.
Hello Daniel

That is going to be very difficult as it happened when moving a row. Anyway I will try to get that again.

Hello Daniel

Problem found (not the solution). I enclose you a super simple test case.

```
GridCtrlDragtest::GridCtrlDragtest()
{
    CtrlLayout(*this, "Window title");

    grid.ResizeColMode(0);
    grid.Inserting().Appending().Removing().Editing().Duplicating().Clipboard().SetToolBar()
        .EvenColor().MovingRows(1).Dragging().DrawFocus().ColoringMode(2)
        .SetCursor(0);

    grid.AddColumn("First");
    grid.AddColumn("Second");

    grid.Clear(); // Problem appears if this line is set
    grid.Add("Hello", "World");
    grid.Add("Hello2", "World2");
}

GUI_APP_MAIN
{
    GridCtrlDragtest().Run();
}
```

When dragging second line before first line it says "Moving row 2 before row 0". It should have to say "row 1". After that the exception appears. If I remove the Clear(), everything works perfect.

Thank you for a great testcase! Bug hopefully fixed The only thing I worry about is if that fix didn't break some other corner cases... but we will see
