Hi,
I installed Ubuntu 12.04 and install theIDE with files .deb for Ubuntu 11.10.When using the GridCtrl package and want to run the application, the windows does not appear, but the process is running.

The error is as follow:

The program '...' received an X Window System error.
This probably reflects a bug in the program.
The error was 'RenderBadPicture (invalid Picture parameter)'.
(Details: serial 121 error_code 163 request_code 149 minor_code 7)
(Note to programmers: normally, X errors are reported asynchronously;
that is, you will receive the error a while after causing it.
To debug your program, run it with the --sync command line
option to change this behavior. You can then get a meaningful
backtrace from your debugger if you break on the gdk_x_error() function.)

Someone got this error / bugs?

Hi Federico,

This issue is already solved. Details can be found in this thread. What version of U++ did you install? You should get at least 4454 or newer, to avoid this.

There might be slight problem that the Ubuntu Precise packages are right now only in the testing PPA and also the packages are kind of outdated, because of some changes in packaging (long story ) but I will make the necessary changes sometime during this weekend and you should have fresh .debs in the upp-nightly PPA by monday

Best regards,
Honza
