Hi,

Since Postgres 9 default value of "standard_conforming_strings" has been changed to ON and it means that it is necessary to use E'...' escape syntax. Unfortunately SqlBinary doesn't do this. Can you Mirek add an 'E' to binary case in SqlCompile?

```
case SQLC_BINARY: {
    int l;
    ReadSqlValue(l, s);
    if(r) {
        if(l == 0)
            *r << "NULL";
        else
            switch(dialect) {
                case PGSQL: {
                    *r << "E'"; //<-----
                    const char *e = s + l;
```
