Subject: Bug in translation system?

Hi!
I don't know if I'm doing something wrong, but looks like widgets are not resizing to allow different text sizes as they get translated:

http://i.imgur.com/nWqOZ.png

Take a look. Translation is OK, but texts get out of widgets instead of resizing them.

This is the report dialog.

Well, not really a bug, a feature... given U++ dialog layout system.

You should account for this when creating translation (e.g. attempt use texts with approximately same number of letters); in specific cases we can also increase the area for the text in dialog.
