Subject: GridCtrl WhenPaste Posted by koldo on Mon, 02 Jul 2012 08:27:57 GMT View Forum Message <> Reply to Message

Hello Daniel

Now GridCtrl has WhenPasteCell that is called once per every cell of a pasted selection.

Could you add a WhenPaste called after all cells has been pasted?.

The goal of this is to have a way to do checks in all pasted data. This could be made once per pasted cell but it would not be efficient $(20 \times 50 = 1000 \text{ cells added} => 1000 \text{ times data checked}$ when this check could be done only once at the end)

Hello Daniel

What do you think about this?
