Question coming again

```
void DoOpen() {  
    if(dlg.IsOpen())  
        dlg.Close();  
    else  
        dlg.Run();  
}
```

it from gui tut "22. Non-modal dialogs",
if i change "dlg.Open()" to "dlg.Run()"(i just want modal dialog)
then if i want to close the dialog i must execute dlg.Close() twice!

What's wrong?

If you choose to use Run, you should close window with Break. Thing is, Run starts a new modal loop, to exit the window, you have to end this loop.
