Subject: Jsonize of strings is corrupted

Recently the jsonization of strings was changed and ordinary utf-8 characters were replaced by \uXXXX sequences.

It created two problems: one is that there is no way to switch back to "classic" string jsonization.

The second is that serialization and deserialization with Jsonize corrupts string data.

I propose keeping classic strings jsonization by default (it generates less data and compatible with browsers). If one needs \uXXXX sequences, he may use additional help functions like `JsonizeStringEscaped(myString)`
