hilo,

I want to build this:

<http://www.webkinesia.com/games/tictactoe.php>

on my windows installed U++.

now I have some difficulties with the SDL_mixer and SDL_image.

namely when the app wants to start it is crashing. Actually the build seems to be successful but I get a nice message:

"The application was unable to start correctly (<a nice hex address>). Click OK to close the application."

now I don't know how to debug the source of this error. compilation succeeds, build succeeds and then it crashes.

could you guys please give me some "pointer" where to start reading/searching for this (probably) misconfiguration?

I have had difficulties finding SDL_mixer/_image.lib files. so, the version I have maybe not the perfect ones (but I don't know how to crosscheck that...)

also my problem is that I don't know how to use the DLLs in U++ that are available at the http://jcatki.no-ip.org:8080/SDL_image/ and http://jcatki.no-ip.org:8080/SDL_mixer/. I mean the build configuration in the U++ one needs libs and not DLL....

regards,

g6b0r

sorry folks, I figured it out. I was using wrong SDL image and mixer libs...

I changed to use these:

http://www.libsdl.org/projects/SDL_mixer/release/SDL_mixer-devel-1.2.12-VC.zip

http://www.libsdl.org/projects/SDL_image/release/SDL_image-devel-1.2.12-VC.zip

and it successfully builds and starts now:)
