Source: http://zint.github.com/

Description:
A barcode encoding library supporting over 50 symbologies including Code 128, Data Matrix, USPS OneCode, EAN-128, UPC/EAN, ITF, QR Code, Code 16k, PDF417, MicroPDF417, LOGMARS, Maxicode, GS1 DataBar, Aztec, Composite Symbols and more.

Its a great barcode library supporting many symbologies. To use it in U++, you need to download it from the above mention link for Linux or Windows.

For Linux: You need to compile using make; make install
For Windows: You need to compile it into a .dll and .lib (included in zip).

Note: On Windows, after compiling, it will not run if the zint.dll is not present in the same folder where Barcode.exe is generated. U can optionally copy the dll in System32 and register it with regsvr32.exe.

This barcode generator is not bad. Thanks for sharing. It supports to generate so many barcode types. But I have a question. Can the size of the created barcode be adjusted? Just like this passage says: barcode image settings.

Feel so nice to see so many practical suggestions here, I am new to know the barcode tools and I feel quite interested in the vb.net source for code128 barcode generator. What lucy313 recommended seemed to be able to meet my requirements. Sounds nice!
