Hi chaps,

I am having problems with Docking that I never had before. This problem can be reproduced with the example DockingExample2 in Bazaar, so it is not my application but something connected with Docking itself or with the latest issue of U++.

You can reproduce the bug by running DockingExample2 and then clicking in the closing icon of any of the windows of the Ctrl; after the closing of the Ctrl the main program gets stuck with no response whatsoever (the scroll down menu for docking windows in the menu bar gets stuck as well). To recover the control of the program, you have to click outside the main windows program.

Is there any possibility to fix this bug?

Many thanks.

Cheers,

Javier

It's a known bug, I reported it quite some time ago and it's in the "to-do list"
