Hi everobdy,
I am looking for building an light application for WinCE. I have not experience with this O.S. and I wish to search some ways for try to do it.

There is any suggestion for build applications using U++? Package flags? Compiler flag? There is some suggested compiler?

For now I have no idea around WinCE and what is different from other Windows based O.S., so, any received information will be for me very important.

Thanks

Use the "Search" function for WinCe.

It pulls up more than 100.
