Hi all,
We are using Upp to develop a SNS client.Upp is cool and powerful.We use Upp to show news feed,photos,blogs,etc.
Here are some screen shots.

Cool!
How do you render "rich" content? Is it some kind of html-engine embedded into U++ Draw?

Upp's RichTextCtrl supports "rich" content in QTF,but it doesn't support html.So we create a class derived from RichTextCtrl.It can parse a few html tags such as <img>,<a>,<table>,etc and convert the rich text to RichPara and RichObject.

You've done remarkable work there!
I see a flash player on screenshots. Did you manage to place "active" content too?

Our html ctrl is very simple and not efficient .
The flash player is another process and a wrapper of web browser ctrl.We put it over our window to show flash video.
