Hello Massimo

Protect package uses Web. However it seems it is deprecated.

Could you find the way to remove it?

Hi Koldo... that's weird, because I just updated uppsrc and web package is still there.
Anyways.... is there some post somewhere of replaced functions of web package ? I didn't find anything about it.

Web is still in SVN, but it is not shipped in the tarballs anymore. Therefore it should be removed from packages using it, so that it doesn't confuse users who don't use SVN

Yep, ok... but I'm using :

in Updater :

HttpClient

in Protect :

HttpClient
SmtMail
ScgiServer

And I'm using them in a commercial app.... And I wouldn't like to have problems with my customers.

So.... there's somewhere something about equivalents of those, with differences in behaviour clearly marked ?

Otherwise, sorry but they'll stay like they are up to when I've got some (much) time to test them deeply.

Max

Edit : another possible solution would be to move the old good Web package to bazaar, in order not to break former packages.

Do not worry about breaking apps - Web will be maintained.

'Deprecating' means it is discouraged from being used in new projects. Web functionality was replaced with better alternatives, which are also documented.

I guess U++ is confusing enough to provide new users with two sets of TCP/IP interfaces...

Sorry about causing issues in bazaar. I think replacing HttpClient with HttpRequest should be quite trivial, instead of SmtMail there is Core/SMTP, ScgiServer is 'covered' by HttpHeaders but there the replacement might be more difficult.
