Can an edit field be added to a sub menu and if so how.

```
void SettingsMenu(Bar& bar) {  
    bar.Add("m meters", THISBACK(Setm)).Check(mX);  
    bar.Add("km kilometers", THISBACK(Setkm)).Check(kmX);  
    bar.Add("ft feet", THISBACK(Setft)).Check(ftX);
```

There are about a dozen more.

I would a user to be able to set a time zone relative to UTC.

I have it hard coded -7 for the Pacific TZ.

Rather than have a box pop up where a user types in his TZ relative to UTC just have an edit field it can be typed in.

If not then maybe just a scroll box where -11 to +11 can be picked.

Yes. Check docs for

```
void Bar::Add(Ctrl& ctrl, ..)
```

family.

Thanks Mirek but looking at the docs for CtrlCore, CtrlLib, MenuBar, Bar, EditField derived classes, etc and trying about 20 examples I did not find out how to put an edit field in the menu.

Widget placement, size, etc. yes.

No direct code or info on editfield in menu.

About 8 hours looking.

Could you point me to an example or give a few lines of code on how it can be done.

nneilson wrote on Thu, 11 October 2012 18:24Widget placement, size, etc. yes.
Something like this should work:

```
EditString edit;
void Menu(Bar& bar) {
    bar.Add(edit.SizePos(),50);
    bar.Add("Exit", THISBACK(Exit));
}
```

Best regards,
Honza

EDIT: Added full source in attachment.

Thanks Honza!

The main.cpp you attached was what I needed to see how it is done.

edit: Got something working, it helps to be pointed in the right direction.
