Based on dolik's proposal and patch, I have refactored "spin value situation" replacing 'hard coded' Edit*Spin classes with WithSpin template, that can be applied to any widget with MinMax/GetMin/GetMax methods.

In the process, I also added new EditDateSpin, EditTimeSpin widgets (two lines of code .

Great,
I was also thinking about the Date variant, but it somehow resulted in compile errors caused by the default value in the template... I'll have to check how you solved it
