Hi,

I'm going through the GUI tutorial on a windows machine.

Anytime I build the code in the project, I get an error similar to "can't open output file."

While troubleshooting, I found the option to open output folder, but I get the attached error anytime I choose the option

How do I set up my output folder path in TheIDE?

thanks

When you start TheIDE, there is "Assembly" pane (where you see MyApp). Right-click "MyApps", then choose "Edit assembly".

Mirek
