I would like to display only the FileName in an EditField rather than the full path.
This is the code now:
```
  String filename = fn;
  FileIn inF((String)fn);
  Point2<<=Value(fn);

String  GetFileName(const char *path);
```
How is this used in this case?

I tried several variations and just get errors.
```
Point2<<=Value(GetFileName(fn));
... (*fn)
Point2<<=GetFileName(fn);
```

cannot convert parameter 1 from 'Upp::FileSel' to 'const char *'

Did you try GetFileName(filename) instead of GetFileName(fn)?

I did not try that before but it works OK.

Thanks!!
