Hallo guys! I'm here asking for you support again...

my little program is going on, i can compile it correctly on windows but on Ubuntu i receive this strange error (never seen before).

What does it mean???

In file included from /home/matteo/upp/uppsrc/Sql/sch\_model.h:162:0,

program

Hi Matteo,

This error should mean that there is a character in the file that (gcc thinks) is not supposed to be there. The three numbers are its octal representation of the offending character. Since they are all rather high numbers, those are probably some non-ascii characters. Check the files at given lines and positions to see what is there. Note, that sometimes those characters might be non-printable in current charset, so it might be hard to spot them Hexaeditor can help in such case.

Best regards,  
Honza

idkfa46 wrote on Mon, 12 November 2012 17:57

Thanks!

You'll probably have to escape them somehow. MSC is probably not that picky in this

Honza
