Can i add a dropdown submenu in a ToolBar?
Sure it works in MainMenu!

This's what I found looking at manual:

```
Item& Add(bool enable, const char *text, Callback1<Bar&> proc)
Item& Add(const char *text, Callback1<Bar&> proc)
Item& Add(bool enable, const char *text, const UPP::Image& image, Callback1<Bar&> proc)
Item& Add(const char *text, const UPP::Image& image, Callback1<Bar&> proc)
Adds a submenu. For toolbar, simply adds all items of proc. enable sets the item status.
```

I cant understand how does it work

Regards,
Matteo

You can add dropdown menus from dropdown menus.

```
void MainMenu(Bar& bar) {
    bar.Add("File", THISBACK(FileMenu));
    bar.Add("Layers", THISBACK(LayersMenu));
    bar.Add("FAA", THISBACK(FAAMenu));
```

```
void FAAMenu(Bar& bar) {

    bar.Add("TAC", THISBACK(TacMenu));
    bar.Add("WAC", THISBACK(WACsepMenu));
```

You just need to add the additional sub menu bar under the bar you want it under.

Try the examples that come with upp, things like this are in there.

mmm.... it works only with MainMenu!

If I make the same with ToolBar, all items (from ToolBar and Sub menu) appear on the same line divided by a separator but without any submenu!

what's the difference between MainBar and ToolBar?

Regards,
Matteo

Toolbar code:

```
bar.Add(t_("Print"),Icons::Print32(), THISBACK(PrintMenu)).Label(t_("Print"));
```

Dropdown Execution code:

```
void AnketaListDlg::PrintMenu()
{
    MenuBar bar;

    Sql sql;
    sql * Select(REP_ID,REP_NAME).From(REPORTS).Where(REP_TYPE ==
"resume").OrderBy(REP_TYPE,REP_NAME,REP_ID);
    while (sql.Fetch()){
        bar.Add((String)(sql[REP_NAME]),THISBACK2(PrintProc,sql[REP_ID],listanketa(ANK_ID)));
    }
    bar.Execute();
}
```

This procedure use to add Dropdown menu items from Sql table REPORTS
or you can simple add standard menu item like

```
bar.Add(t_("Search"),SVIcons::Find(), THISBACK(SetupQuery)).Label(t_("Search"));
```
