Hi All,

Just wondering are there other library of Sting related functions in U++ other then in String Class and String Utility Function? I am in need of some basic string processing functions like string compare case insensitive, convert case to upper, lower, Title etc.

Thanks

Navi

Navi

Hi Navi

Most of the functions you ask for are there

```
ToUpper(str);           // convert to upper case
ToLower(str);           // convert to lower case
ToLower(str1) < ToLower(str2); // case insensitive compare
```

```
str = ToLower(str); str[0] = ToUpper(str[0]); // is this what you mean by 'title'?
```

Best regards,

Honza

```
str = ToLower(str); str[0] = ToUpper(str[0]); // is this what you mean by 'title'?[/code]
```

Best regards,
Honza

Thank you very much Honza. Great! Silly me, I was expecting them in String headers. By Title case I was actually meaning Upper Case the first letter of every word. But I can always make my own from the above functions.

Regards,
Navi

Hello Navi

In that case you can use InitCaps() .

Go here and see what you have to choose.
