Hi!
I'm using a SqlArray together with Sqlite.
I try to insert a Date in 01/12/2012 format. After I reopen the application it comes as 2012-12-01 format.

How can I make it appear as 01/12/2012 format?

lectus wrote on Sat, 01 December 2012 14:44Hi!
I'm using a SqlArray together with Sqlite.
I am not familiar with either of these but you may need to format the Date at start up.

I have 5 formats for distance: feet, miles, meters, kilometers and nautical miles.
Three for angle format: decimal degrees, degrees minutes and degree minutes seconds
Five for number of decimal places.

Whatever code you have to get the 01/12/2012 format that code needs to be run through on start up and whenever the date is updated.

Note near the bottom 'Save > Exit'
This saves all the settings in a .cfg file that is run through at start up.

The line above that 'Save Location' if checked will save the latitude, longitude, alt/zoom, heading and pitch.

The U++ app and also the java globe app will be opened as it was on exit.

edit: That is like TheIDE used to be rather than opening in Full Screen.

```
GUI_APP_MAIN
{
  SetDateFormat("%3:02d/%2:02d/%1:4d"); // set dd/mm/yyyy format
  SetDateScan("dmy"); // same but for input

............etc
```
