My app seemed to work on Linux, but on Windows it only stores the Date. The time information is missing.

Hi,

Can you show us the relevant part of your table schema and your code handling the storing and reading of this value?

Honza

Hi!

If I want to store a U++ Time in DD/MM/YYYY HH:MM format in Sqlite database what do I need to do?

I'm having trouble deciding if I should use:

```
TABLE_(MY_TABLE)
 DATE_ (tm)
END_TABLE
```

or

```
TABLE_(MY_TABLE)
 TIME_ (tm)
END_TABLE
```

or even

```
TABLE_(MY_TABLE)
 DATETIME_ (tm)
END_TABLE
```

in .sch files.

I'm using a SqlArray control.
